SUMMARY

AI/ML engineering graduate (BE, June 2026) with internship and freelance experience building LLM-powered applications, RAG systems, generative AI and image classification pipelines, and agentic automation workflows in Python, Node.js, and Next.js. Integrated LLMs into web and mobile products through REST APIs and delivered client projects end to end.

EXPERIENCE

Web and Automation Intern, SynVibes Analytics, Malad | June 2025 - January 2026
- Engineered a stock market analytics web application with Next.js and Node.js that generates LLM-based insights for financial analysis.
- Designed agentic n8n workflows orchestrating LLM tool calls and multi-step decisions to automate scheduled task execution, reminders, and multimodal (text and image) content generation for social media publishing.
- Prototyped a cross-platform healthcare mobile app in React Native and Expo, integrating an LLM-powered personalized chatbot and video communication.
- Delivered an e-commerce prototype on Shopify.

Freelance AI Developer, Web Developer, and Automation Consultant, Self-Employed, Remote
- Consulted for a firm on automating its manual invoice and document-handling workflows, handling client communication and requirements gathering to deliver the automation.
- Developed a generative AI and computer vision pipeline for news image generation and image classification for a client (further details confidential under NDA).
- Designed, built, and delivered a responsive e-commerce website for a client's flower business using Next.js and Supabase, hosted on Vercel, enabling customers to browse products and place orders online.

Data Science Intern, Infinity Learning, Remote | June 2024 - December 2024
- Authored technical case studies and hands-on assignments across six tools: Python, SQL, Excel, Power BI, Tableau, and R.
- Evaluated data science and analytics submissions for technical accuracy, consistency, and quality.
- Researched corporate training demand on LinkedIn and other platforms, and worked with the data science team to turn analytical topics into learning material.

Frontend Developer Intern, Sahu Technologies, Ghatkoper | April 2022 - May 2022
- Built responsive web projects in HTML, CSS, and JavaScript, plus Python automation scripts.

PROJECTS

- **HR Policy RAG Assistant**: Engineered a retrieval-augmented generation (RAG) chatbot that answers employee queries from a 40-page HR policy document in about 8 seconds. Embeds document chunks with Hugging Face models, indexes vectors in FAISS for similarity search, generates grounded answers with Gemini, and exposes the pipeline through a FastAPI REST API.
- **Stock Market Analytics and Prediction**: Built a web application combining an LLM and ML models to analyze stocks against user-defined conditions.
- **E-Commerce Demand Forecasting and Sales Dashboard**: Engineered weekly demand time series from e-commerce sales data using Python and Pandas, benchmarked naive and ARIMA forecasting models with MAE and RMSE, and delivered an interactive Power BI dashboard for sales trends, revenue patterns, and top-performing categories.
- **Virtual Painter**: Built a real-time computer vision application using OpenCV and MediaPipe hand landmark detection, mapping hand gestures to drawing actions on a virtual canvas.
- **Social Media Content Automation**: Designed a scheduled agentic workflow that generates niche-specific content and publishes it to social media platforms at set intervals.

EDUCATION

BE in AI/ML, Honours in Data Science, Universal College, Naigaon | July 2023 - June 2026
Diploma in IT, Vidyalankar Polytechnic, Wadala | September 2020 - May 2023

LANGUAGES AND TECHNOLOGIES

Languages: Python, JavaScript, SQL, C++
AI/ML: LLM integration, Generative AI, RAG, agentic workflows, embeddings, vector search (FAISS), Hugging Face, PyTorch, Gemini, image generation, image classification, computer vision (OpenCV, MediaPipe), model training and evaluation, ARIMA forecasting
Web and backend: FastAPI, Node.js, Next.js, React, React Native, Supabase, Vercel, REST APIs
Databases: PostgreSQL, MongoDB
Data and tools: Pandas, Power BI, Docker, n8n, Shopify, workflow automation, E-commerce development
